

PART-A

Name of the Student: P. G. V. N. S. Srija

Signature of the Student: P. Srija Roll No.: 230123043

Signature of the Invigilator: Ganesh Mr. Meher

INSTRUCTIONS

1. Check that you have **10 printed pages**. The PART-A of the examination has **3 questions**, for a total of **20 points**.
2. Attempt **all questions**.
3. There is **no credit** for a solution if the appropriate work is not shown, even if the answer is correct.
4. Write your answers in this booklet and only in the **space marked for answers**. Any answer written in any space other than the designated space **will not be evaluated**.
5. The pages numbered **8 to 10** are kept as **additional pages**. If you cannot able to fit a complete answer in the space provided just after the question, you can use these three pages by referring the page number of additional page in the original space.
6. At the beginning of the examination, a supplementary sheet has been provided only for rough work. Should you need more, please ask the invigilator.
7. No question requires any clarification from the instructors or invigilators, even if a question has an error or incomplete data. The students are advised to write answer according to their understanding or write reasons for why it is not possible to solve partially or completely that question by citing errors/insufficient data.

Question:	1	2	3	Total
Points:	5	6	9	20
Score:	1	0	1	02

QUESTIONS

1. (5 points) Let Y and ϵ are the response variable and the error in a regression problem, respectively. θ_1 and θ_2 are the two parameters. Let $y_i, i = 1, 2, 3$, be the observed values of the response variable. Consider,

$$Y_1 = \theta_1 + \theta_2 + \epsilon_1,$$

$$Y_2 = \theta_1 - 2\theta_2 + \epsilon_2,$$

$$Y_3 = 2\theta_1 - \theta_2 + \epsilon_3,$$

where $E(\epsilon_i) = 0$, and $V(\epsilon_i) = \sigma^2, i = 1, 2, 3; \sigma > 0$. Find the least square estimates (LSE) of θ_1 and θ_2 .

$$Y = \theta_1 x_1 + \theta_2 x_2 \quad \epsilon_1 = y_1 - Y_1 \quad \text{given } E(\epsilon_i) = 0$$

take

$$Y = (Y_1, Y_2, Y_3)'$$

$$\epsilon_2 = y_2 - Y_2$$

$$V(\epsilon_i) = \sigma^2$$

$$\epsilon_3 = y_3 - Y_3$$

take $X = \begin{bmatrix} 1 & 1 & 1 \\ 1 & 1 & -2 \\ 2 & -1 & 1 \end{bmatrix}$

take

$$\beta = \begin{bmatrix} 0 \\ \theta_1 \\ \theta_2 \end{bmatrix}$$

$$\theta_1 = \frac{S_{xy}}{S_{xx}} = \frac{\sum (x_i - \bar{x})(y_i - \bar{y})}{\sum (x_i - \bar{x})^2}$$

01

1. (10 marks)

(a) Let $A = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix}$ and $B = \begin{pmatrix} 4 & 3 \\ 2 & 1 \end{pmatrix}$.
 (i) Find $A+B$ and AB .

(ii) Find A^{-1} and B^{-1} .

2. (10 marks)

(a) Let $A = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix}$ and $B = \begin{pmatrix} 4 & 3 \\ 2 & 1 \end{pmatrix}$.

(i) Find $A+B$ and AB .

(ii)

(b) Let $A = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix}$ and $B = \begin{pmatrix} 4 & 3 \\ 2 & 1 \end{pmatrix}$.

(i) Find $A+B$ and AB .

(ii)

(c) Let $A = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix}$ and $B = \begin{pmatrix} 4 & 3 \\ 2 & 1 \end{pmatrix}$.

(i) Find $A+B$ and AB .

(ii)

(d) Let $A = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix}$ and $B = \begin{pmatrix} 4 & 3 \\ 2 & 1 \end{pmatrix}$.

(i) Find $A+B$ and AB .

(ii) Find A^{-1} and B^{-1} .

(iii)

(iv)

2. Let U_1 and U_2 be two independent uniform random variables on the interval $(0, 1)$. Suppose that $\mathbf{X} = (X_1, X_2, X_3)'$, where $X_1 = U_1$, $X_2 = U_2$, and $X_3 = U_1 + U_2$.
- (a) (3 points) Compute the correlation matrix ρ of $\mathbf{X}$.
- (b) (3 points) Find the variance of first principal component based on the correlation matrix that you find in part (a).

(a) given $\mathbf{X} = (X_1, X_2, X_3)'$ = $\begin{bmatrix} X_1 \\ X_2 \\ X_3 \end{bmatrix}$ take $E(U_1) = \mu_1$
(take then) $E(X_1) = \mu_1$ $E(U_2) = \mu_2$
 $E(X_2) = \mu_2$
 $E(X_3) = \mu_1 + \mu_2$

$$E[\mathbf{X}] = \begin{bmatrix} \mu_1 \\ \mu_2 \\ \mu_1 + \mu_2 \end{bmatrix}$$

$$\text{Cov}[\mathbf{X}] = \begin{bmatrix} \sigma_1^2 & \sigma_{12} & \sigma_1^2 + \sigma_{12} \\ \sigma_{21} & \sigma_2^2 & \sigma_2^2 + \sigma_{12} \\ \sigma_1^2 + \sigma_{12} & \sigma_2^2 + \sigma_{12} & \sigma_1^2 + \sigma_2^2 + 2\sigma_{12} \end{bmatrix}$$

coefficient of correlation = $\frac{\text{Cov}(X_1, X_2)}{\sqrt{\text{Var}(X_1)\text{Var}(X_2)}}$

$\Rightarrow$ correlation matrix ρ of $\mathbf{X}$ =

$$\rho_{11} = 1$$

$$\begin{bmatrix} 1 & \frac{\sigma_{12}}{\sigma_1 \sigma_2} & \frac{\sigma_1^2 + \sigma_{12}}{\sigma_1 \sqrt{\sigma_1^2 + \sigma_{12}}} \\ \frac{\sigma_{21}}{\sigma_1 \sigma_2} & 1 & \frac{\sigma_2^2 + \sigma_{12}}{\sigma_2 \sqrt{\sigma_1^2 + \sigma_{12}}} \\ \frac{\sigma_1^2 + \sigma_{12}}{\sigma_1 \sqrt{\sigma_1^2 + \sigma_{12}}} & \frac{\sigma_2^2 + \sigma_{12}}{\sigma_2 \sqrt{\sigma_1^2 + \sigma_{12}}} & 1 \end{bmatrix}$$

Given

U_1, U_2 are independent r.v $\Rightarrow \text{Cov}(U_1, U_2) = 0$

$\Rightarrow$

correlation matrix ρ of $\mathbf{X}$ =

$$\begin{bmatrix} 1 & 0 & 1 \\ 0 & 1 & 1 \\ 1 & 1 & 1 \end{bmatrix}$$

$$\Rightarrow \text{Cov}(X_1, X_3) = \sigma_1^2 + \sigma_{12}$$

$$\begin{aligned} \text{Var}(X_3) &= E[(U_1 + U_2)^2] \\ &= E(U_1^2 + U_2^2 + 2U_1U_2) \\ &= \sigma_1^2 + \sigma_2^2 + 2\sigma_{12} \end{aligned}$$

(b) Variance of first principal component

take U_1 & U_2 are i.i.d random variables then $\mu_1 = \mu_2 = \mu$
 identical & independently distributed) $\sigma_1 = \sigma_2 = \sigma$

now for the variance of first principal component.

Let's find out eigen values of the covariance matrix of X .

$$\Rightarrow \lambda^3 - 4\sigma^2\lambda + 3(\sigma^2)^2\lambda = 0$$

then eigen values $\Rightarrow 0, 3\sigma^2, \sigma^2$

$$\begin{vmatrix} \sigma^2 - \lambda & 0 & \sigma^2 \\ 0 & \sigma^2 - \lambda & \sigma^2 \\ \sigma^2 & \sigma^2 & 2\sigma^2 - \lambda \end{vmatrix} = 0$$

largest eigen value = $3\sigma^2$

Variance of first prin component = $3\sigma^2$

and proposition

of variance of 1st PC = 75%.

3. Let the matrix of distance be

	1	2	3	4
1	0			
2	1	0		
3	11	2	0	
4	5	3	3.5	0

- (a) (6 points) Cluster the four items using each of the following procedures:
- Complete linkage hierarchical procedure.
 - Average linkage hierarchical procedure.
- (b) (3 points) Draw the dendrograms and compare the results obtained using previous two procedures.

ca) (i) Given to cluster 4 items using complete linkage hierarchical procedure

$$\text{use } d_{uv}, d_{uw} \Rightarrow \max(d_{uv}, d_{uw})$$

$\downarrow$ $\downarrow$
 dist dist
 between between
 u & v u & w

take $U = \text{pt } 2$

$V = \text{pt } 4$

pt 1 $\rightarrow \max(1, 5) \Rightarrow 5$

pt 1 joins cluster U

pt 3 $\rightarrow \max(2, 3.5) \Rightarrow 3.5$
